Junflon® Microwave Coaxial Cable Assemblies

Junflon® Microwave Coaxial Cable Assemblies (MWX) are flexible signal transmission lines that take advantage of the remarkable properties of fluoropolymers. They have been demonstrated in applications up to 67 GHz range.

MWX feature low insertion loss and low VSWR; less signal leakage and interference due to high shielding effectiveness; and higher density packaging applications.

Junkosha offers highly reliable product line up for micro/millimeter wave applications to meet customers' needs.

MWX0 Series

Phase Stability

The MWX0 series offer excellent phase stability against temperature fluctuations from -30 to +85°C and bending. They are ideal for connecting Vector Network Analyzers for precision measurements.

Major applications

- Vector network analyzers;
- RF and high-speed digital testers

MWX1 Series

Wide Temperature

The MWX1 series offer excellent durability of connector and cable bending in wide temperature range from -65 to +125°C for microwave measurements.

Major applications

- Microwave measurements requiring a wide range of temperatures, such as device evaluations
- Inspections requiring high durability

MWX2 Series

Flexible

The MWX2 series offer flexibility and low repulsion to reduce stress loads to measured objects with excellent phase stability against bending in intensive use of microwave measurement. Cables are offered in wide range of the frequencies of 26.5, 40, 50, and 67 GHz with various connectors.

Major applications

- Microwave/millimeter-wave measurements
- Micro-device measurements requiring high flexibility

MWX3 Series

Equipment Wiring

The MWX3 series offer excellent phase stability against temperature fluctuations as low as -65 to high as +125°C by using a porous PTFE dielectric material.

Seven types of cables are offered in maximum frequencies of 18.5, 26.5, and 40 GHz and insertion loss values.

Major applications

- Electronic equipment for communication satellites and ground stations; electronic devices for aircraft equipment; air traffic control equipment
- Electronic equipment for ships; equipment highly susceptible to signal leaks and interference

MWX4,5 Series

Formable

The MWX4 and 5 series offer formability of the easy wiring, ideal for internal and external wiring of applications which require high frequencies up to 67 GHz, with lower insertion loss than semi-rigid cables. A broad range of other connectors are available to meet your specific needs.

Major applications

- Fixed wiring for communication devices at base stations
- Fixed wiring in R&D-use circuit boards

List of Cable Specifications

MWX0 Series Cable assemblies with high phase stability for measuring instruments

Frequency	Cable type	Typical insertion loss (dB/m)		VSWR		Cable outer diameter (mm)	Mass (g/m)	Minimum bending radius (mm)	Continuous operating temperature (°C)	Assembly length (mm) ^{(*)1}		Described in

*1) Please contact us if your assembly requirements are non-standard length.

*2) Armored type: Armored with a protection sheath to reduce damage caused by mechanical movement.

MWX0 Series

Cable assemblies with high phase stability for measuring instruments

The MWX0 series cable assemblies offer excellent phase stability against temperature fluctuations and against bending. They are ideal for connecting vector network analyzers for precision measurements (Continuous operating temperature range from -30 to +85 °C)

How to select

1.Simple criteria for connector selection

- Choose a suitable connector for your measuring instrument.
- The smaller the connector, the higher the maximum operating frequency.
- The larger the connector, the higher the power rating.

MWX0 series typical insertion loss

2.Power rating

The diagram to the below shows the relationship between frequency and power rating. The values are calculated at 25 °C and at sea level. The power rating will need to be corrected for different ambient temperatures and altitude. Power ratings may decrease, depending on the connector selected.

Power rating of MWX0 series at sea level

*The above figures are measured values for reference only.

Connector compatibility

Cable type	Cable maximum operating frequency (GHz)	Compatible connector					
		26.5 GHz		50.0 GHz		67.0 GHz	
		3.5 mm (m)	3.5 mm (f)	2.4 mm (m)	2.4 mm (f)	1.85 mm (m)	1.85 mm (f)
MWX021	26.5 GHz	●	●				
MWX051	50.0 GHz			●	●		
MWX061	67.0 GHz					●	●

*Armored type: Armored with protection sheath to reduce damage caused by mechanical movement.

Cable design

Bending test data

Bending angle: 90° right/left
 Test load: 0g
 Bending speed: 30 cycles/min
 Bending radius: 120mm

Bending test method

Connector plug / unplug cycle test

The result of insertion loss and return loss after 10,000 cycle plug / unplug test. At MWX021-00100DMSDFS, plugged to 3.5 mm (f) type connector.

*The above figures are measured values for reference only.

MWX021

DC~26.5 GHz

Basic Cable Properties

Electrical properties

Maximum operating frequency	26.5 GHz
Characteristic impedance	$50 \pm 1 \ \Omega$
Capacitance (typ.)	85 pF/m
Propagation delay (typ.)	4.21 nsec/m
Shortening coefficient of wavelength (typ.)	79 %
Higher mode frequency (typ.)	28 GHz
VSWR (per connector/both ends of assy.)	1.153/1.33

Mechanical properties

Cable outer diameter	8.5 mm
Minimum bending radius (inner side)	30 mm
Cable mass (typ.)	122 g/m
Continuous operating temperature range	-30~+85 °C
Armored side pressure	196 N/cm

Connector

3.5 mm (m) straight (Code:DMS)

3.5 mm (m) straight (Code:DFS)

Order form example

● Example 1

Assembly length : 1000 mm
 Connector I : 3.5 mm (f) straight
 Connector II : 3.5 mm (m) straight

Catalog No.:

MWX021-01000DFSDMS/B

(See P.20 "Connector combination codes")

MWX021 Technical Data

Cable typical insertion loss

Static bending data (insertion loss, phase)

Bending radius: 30 mm

*Guaranteed value within $\pm 5.7^\circ$ at 26.5 GHz (In shipping value)
 *The cable was wrapped 360° around a mandrel.

MWX021 Phase change vs. temperature

The cable was measured in chamber every 20°C from -30 to 90°C , 1 hour after the temperature changed. Figure shows the excellent phase stability over the temperature changes.

*The above figures are measured values for reference only.

MWX051

DC~50.0 GHz

Basic Cable Properties

Electrical properties

Maximum operating frequency	50 GHz
Characteristic impedance	$50 \pm 1 \ \Omega$
Capacitance (typ.)	85 pF/m
Propagation delay (typ.)	4.19 nsec/m
Shortening coefficient of wavelength (typ.)	79 %
Higher mode frequency (typ.)	61 GHz
VSWR (per connector/both ends of assy.)	1.21/1.46

Mechanical properties

Cable outer diameter	6.6 mm
Minimum bending radius (inner side)	30 mm
Cable mass (typ.)	76 g/m
Continuous operating temperature range	-30~+85 °C
Armored side pressure	196 N/cm

Connector

2.4 mm (m) straight (Code:LMS)

2.4 mm (f) straight (Code:LFS)

Placing orders

Catalog number

Note 1) The unit of assembly length is mm.

Shown as a five-digit number. If the number consists of fewer than five digits, remember to add zero (s) to the left of the first digit to make it five digits.

The assembly length is measured based on the reference planes, not on the connector ends, shown at the figure to the left.

Note 2) Armored-type cables will have a "/B" appended to the connector combination code.

No appended to the connector combination code when cables are not armored type.

Delivery time of MWX0,1 Series

Delivery time

MWX0 and MWX1 series will be shipped within 7 business days after received order.

*Leadtime may be effected by larger order volume.

MWX2 Series

Flexible cable assemblies for measuring instruments

Cable assemblies developed for intensive use in microwave/millimeter-wave measurements, with high phase stability against bending (Continuous operating temperature range from -30 to +85 °C).

Flexibility and low repulsion reduce loads on measured objects.

Four cable types are available for max. 26.5, 40, 50, 67 GHz use.

How to select

1.Simple criteria for connector selection

- Choose a suitable connector for your measuring instrument.
- The smaller the connector, the higher the maximum operating frequency.
- The larger the connector, the higher the power rating.

MWX2 series typical insertion loss

2.Power rating

The diagram to the below shows the relationship between frequency and power rating. The values are calculated at 25 °C and at sea level. The power rating will need to be corrected for different ambient temperatures and altitude. Power ratings may decrease, depending on the connector selected.

Test method

Test cable

MWX221, MWX021, MWX121

Test condition

temperature : 24 °C

test load : 454 g

diameter of bar : $\phi 16$ mm

A test cable measuring 1,000 mm in length was formed into a circle with an internal diameter of 300 mm. Both ends were overlapped and secured with tape measuring 50 mm in width. The circularly formed test cable was then suspended, with the overlapping end section at the top and a weight positioned at the bottom. Circularity was measured after five seconds. (Circularity is expressed as the ratio a/b .)

Test result

Test cable	sample 1	sample 2	sample 3	average
MWX221	1.887	2.049	2.011	1.982
MWX021	1.532	1.404	1.482	1.473
MWX121	1.552	1.564	1.595	1.570

● Example 2 MWX221 Armored type

Assembly length : 1500 mm
Connector I : N (m) straight
Connector II : N (m) straight

Catalog No.:

MWX221-01500NMSNMS/B

MWX221 Technical Data

Cable typical insertion loss

Static bending data (insertion loss, phase)

Bending radius: 20 mm

*The cable was wrapped 360° around a mandrel.

MWX221 Phase change vs. temperature

Option

- We have the capacity to deliver products with matched phases for customers who require this characteristic.

*The above figures are measured values for reference only.

MWX241

DC~40.0 GHz

Basic Cable Properties

Electrical properties	
Maximum operating frequency	40.0 GHz
Characteristic impedance	$50 \pm 1 \ \Omega$
Capacitance (typ.)	88 pF/m
Propagation delay (typ.)	4.35 ns/m
Shortening coefficient of wavelength (typ.)	77 %
Higher mode frequency (typ.)	40.5 GHz
VSWR (per connector/both ends of assy.)	1.197/1.43

Mechanical properties	Standard type (armored type)	Non-armored type/Custom-made
Cable outer diameter	9.5 mm	4.1 mm
Minimum bending radius (inner side)	20 mm	20 mm
Cable mass (typ.)	137 g/m	35 g/m
Continuous operating temperature range	-30~+85 °C	-30~+85 °C
Armored side pressure	—	196 N/cm

Connector

SMA (m) straight (Code:AMS)

2.92 mm (m) straight (Code:KMS)

2.92 mm (f) straight (Code:KFS)

N (m) straight (Code:NMS)

2.92 mm (m) swept (custom-made) (*)

(*) Swept is not available to armored type.

Order form example

● Example 1 MWX241 Armored type (standard)

Assembly length : 1000 mm
Connector I : 2.92 mm (m) straight

MWX2 Series

Placing orders

Catalog number

Note 1) The unit of assembly length is mm.

Shown as a five-digit number. If the number consists of fewer than five digits, remember to add zero (s) to the left of the first digit to make it five digits.

The assembly length is measured based on the reference planes, not on the connector ends, shown at the figure to the left.

Note 2) Armored-type cables will have a "/B" appended to the connector combination code.

No appended to the connector combination code when cables are not armored type.

Delivery time of MWX2 Series

Stocks of MWX221

We have following items in stock. We can ship these items immediately.

MWX221-00500AMSAMS (L:500 mm, Connector:both ends SMA (m))

MWX221-01000AMSAMS (L:1000 mm, Connector:both ends SMA (m))

MWX221-00500DMSDMS (L:500 mm, Connector:both ends 3.5 mm (m))

MWX221-01000DMSDMS (L:1000 mm, Connector:both ends 3.5 mm (m))

Delivery time of the other items

MWX2 series will be shipped within 7 business days after received order.

*Leadtime may be effected by larger order volume.

MWX3 Series

Cable assemblies for equipment wiring

The MWX3 series cable assemblies use a porous PTFE dielectric material to ensure excellent phase stability against temperature fluctuations.
(Continuous operating temperature range: -65 °C to 125 °C (-30 °C to 85 °C for MWX315))

We offer seven types of cables with varying maximum operating frequencies (18.5 GHz, 26.5 GHz, 40 GHz) and insertion loss values.

How to select

1.Simple criteria for cable selection

- Insertion loss: The larger the cable outer diameter, the lower the insertion loss.
- Frequency range: The smaller the cable, the higher the higher mode frequency.
- Power rating: The larger the cable outer diameter, the higher the power rating.
- Flexibility: The smaller the cable, the better the flexibility.
- Mass: The smaller the cable, the lighter the cable.

2.Simple criteria for connector selection

- Choose a suitable connector for your measuring instrument.
- The smaller the connector, the higher the maximum operating frequency.
- The larger the connector, the higher the power rating.

3.Power rating

The diagram to the below shows the relationship between frequency and power rating. The values are calculated at 25 °C and at sea level. The power rating will need to be corrected for different ambient temperatures and altitude. Power ratings may decrease, depending on the connector selected.

MWX3 series typical insertion loss

Power rating of MWX3 series at sea level

(*1) The above figures are measured values for reference only.

(*2) MWX313: ~18.5 GHz, MWX321: ~26.5 GHz

(*3) MWX312: ~18.5 GHz, MWX341: ~40.0 GHz

(*4) Phase Matching Connector is also available upon the requirement.

(*5)(*6) Those SMA(m) connectors are uniquely developed by Junkosha, which specified to be used for 26.5 GHz and 40 GHz.

MWX311

DC~18.5 GHz

Basic Cable Properties

Electrical properties

Maximum operating frequency	18.5 GHz
Characteristic impedance	50±1 Ω
Capacitance (typ.)	86 pF/m
Propagation delay (typ.)	4.25 nsec/m
Shortening coefficient of wavelength (typ.)	79 %
Higher mode frequency (typ.)	75.0 GHz
VSWR (per connector/both ends of assy.)	1.182/1.40

Mechanical properties

Cable outer diameter	2.7 mm
Minimum bending radius (inner side)	10 mm
Maximum tensile strength	29.4 N (3 kgf)
Cable mass (typ.)	18.5 g/m
Continuous operating temperature range	-65~+125 °C

Connector

SMA (m) straight (Code:AMS)

SMA (f) straight (Code:AFS)

SMA (m) right angle (Code:AMR)

SSMA (m) straight (Code:SMS)

Bending test data of MWX312

Test method

The connector on one end of test cable (MXW312-00500AMSAMS, measuring 500 mm in length and with SMA (m) connectors on both ends) was fixed in place. The connector on the other end was moved in the sequence a → b → c, after which initial insertion loss and return loss values were compared to those after the test.

 Connector I : 2.92 mm (m) straight
 Connector II : 2.92 mm (m) straight

Catalog No.:
MWX441-KP-KP L=200 mm

Comparison of typical insertion loss (MWX4 series vs. semi-rigid cable)

Comparison of typical insertion loss (MWX5 series vs. semi-flexible cable)

Typical insertion loss (MWX461 L=1000mm)

MWX4,5 Series

Placing orders

Catalog number

*1) MWX411, 412, 511, and 512 come with the standard SMA (m) connector. The product code for the connector is "AP." The standard connector for MWX411 is a 2.92 mm (m) straight type. The product code for this connector is "KP." For MW461, the product code for the SMP (f) straight connector is "SJ." The product code for the SMPM (f) straight connector is "MJ."

*2) Assembly length is measured from the end of one connector to the end of the other connector.

Example)

MWX511 - AP-AP L=1000mm

Cable.....MWX511 type

Connector I.....SMA (m) straight

Connector II.....SMA (m) straight

Assembly length.....1000 mm

Delivery times for formable cable assemblies

MWX4 and MWX5 series will be shipped within 12 business days after received order.

*Leadtime may be effected by larger order volume.

Formable MWX4,5 Series Technical Data 1

Static bending data (insertion loss)

MWX411

MWX412

MWX511

MWX512

Measurement method

The initial value was measured with the test cable connected to the measuring instrument.
The after-test value was measured with the cable wrapped 360° around a mandrel at a position approximately 50 mm from the measuring instrument.

Test conditions

Mandrel diameter

- MWX411, MWX511 : 20 mm
- MWX412, MWX512 : 30 mm
- Test cable length : 300 mm

Fig.1 Schematic description of the static bending test

*The above figures are measured values for reference only.

Repeated Bending Data (insertion loss, return loss)

MWX412

MWX512

Test method

The initial value was measured with the test cable connected to the measuring instrument.

The result after 10 cycle test was measured with the cable wrapped 180° around a mandrel.

Test conditions

Mandrel diameter

•MWX412 : 40 mm

•MWX512 : 30 mm

Test cable length : 200 mm

Formable MWX4 Series Technical Data 3

Temperature characteristics (insertion loss)

Test cable: 2 m

MWX411

(*1) Maximum operating frequency of SMA (m) right angle : 18 GHz

Tolerances for assembly length

Tolerance values are shown below.

Please contact us if your tolerance requirements for phase matching are more stringent.

Assembly length (mm)	Tolerance (mm)
$L \leq 1000$	± 10
$1000 < L \leq 2000$	± 20
$2000 < L \leq 5000$	± 50
$5000 < L$	± 100

About customer-specified swept and right-angle connectors

The angle of Connector II relative to Connector I when Connector I is assumed to be at 0° (as viewed from the direction of Connector I) is indicated by three digits following the catalog number. (The indication is omitted if the angle is 0°.)

Example: If Connector II is at an angle of 90° when viewed from the direction of Connector I:

MWX312-01000AMRAMR-090

6	5	H		6
8	3.75		X	I
10	3	10		
15	2	Ku	J	15
20	1.5	K		20
30	1	Ka	K	30
40	0.75	MILLIMETER		L
50	0.6		50	
60	0.5		M	60
75	0.4			75
100	0.3			100

$$1. VSWR = (1 + \rho) / (1 - \rho) = (1 + 10^{-RL/20}) / (1 - 10^{-RL/20})$$

$$2. \text{Return loss } RL(\text{dB}) = -20 \log \rho \\ = -20 \log (VSWR - 1) / (VSWR + 1)$$

$$3. \text{Reflection coefficient } \rho = (VSWR - 1) / (VSWR + 1) = 10^{-RL/20}$$

$$4. \text{Propagation loss } \alpha(\text{dB}) = -10 \log (1 - \rho^2) \\ = -10 \log (1 - ((VSWR - 1) / (VSWR + 1))^2)$$

Relationship between frequency and wavelength

$$f = c / \lambda \text{ where } c = 2.998 \times 10^8 [\text{m/s}]$$

Relationship between phase change θ [°], frequency f [GHz], cable length L [mm] and propagation delay τ [nsec]

$$L = 0.8328 \times \theta \div \sqrt{\epsilon_r} \div f$$

$$\theta = 1.201 \times L \times \sqrt{\epsilon_r} \times f$$

$$\theta = 360 \times f \times \tau$$

where ϵ_r is the specific dielectric constant of the cable insulator.

Air: $\epsilon_r = 1$, Dense PTFE: $\epsilon_r \approx 2.1$
